Role of Transformational Leadership in Effective Strategic Implementation with the Moderating Effect of Organizational Culture

Onuma Suphattanakul
Lecturer, Department of Social Science and Apply Science, Faculty of Commerce and Management, Prince of Songkla University, Trang Campus, Thailand
onuma.su@psu.ac.th

ABSTRACT
Purpose: This study evaluates the role of transformational leadership in effective strategic implementation. The purposes of this study are; first, to examine the degree of transformational leadership of administrative officials; second, to assess the degree of effective strategic implementation; third, to investigate the impact of transformational leadership on effective strategic implementation. Finally, this study examines the roles of organizational culture as a moderator of the association between transformational leadership and effective strategic implementation.

Methodology: This study uses the case study of municipalities in Trang Province in Thailand. This research employs quantitative methods. The questionnaires are collected from administrative officials of municipalities in Trang Province. Descriptive statistics are used to analyse the data. This study uses Pearson correlation analysis to achieve the associations between two variables. In addition, regression analysis is applied as a suitable statistical tool to test the hypotheses.

Implication: This study combined the framework of strategic management, leadership, and organizational culture for testing the conceptual model. The study is particularly useful for improving the roles of administrative officials in order to achieve effective strategic in municipalities.

1. Introduction
Since the economic crisis in 1997, the Thai Royal government has determined to improve the public administration and increase performance in public sector. The Thai government has initiated strategies to reform government agencies comprising local government. Among many changes including internal and external factors, efforts to strengthen the government strategies have been placed as a main stage by the government. The Thai government has many attempts to create new strategies approved by the Office of the Public Sector Development Commission (OPDC) in order to increase public organizational performance. The strategies aim to improve service quality, competencies of servants, public participation, and governance in administration. They also influence public organizational performance and its sustainable development. Therefore, strategic public management becomes an important tool to give a strong impact on public sectors’ success. Strategic management is generally originated in the business sector. It focuses on the relationship between the external and internal environment and mission,
vision, and objective of the organization. In the recent years, strategic management has been transformed to the public sector. The strategic management in public sectors has been adopted as a response to public needs and requirements. It is considered in increasing public service delivery, efficiency and effectiveness, resources management, and governance.

Strategy implementation is the key process of strategic management to obtain the desired results after the strategy has formulated. Although strategy formulation is a difficult task and important for making strategy work, strategic implementation is even more difficult (Hrebiniak, 2006). It is the challenge and creative process of strategic management. In addition, it covers restructuring the organization, resources management, decision-making processes, and human resource management. This requires organization to create objectives, formulate strategy, motivate employee, and allocate resources to accomplish strategies. According to Steiner (2004), strategic implementation is a main step that includes compensation, evaluation, motivation, and controlling. It challenges to transfer plans to actions that actually lead to the effectiveness of organizational performance. Thus, this study seeks to evaluate effective strategic implementation as organizational performance. However, many organizations especially public organizations struggle to turn plans into actions that will enable the strategies to be successful (Dewar et al., 2011). Due to various factors effecting strategic implementation such as organizational structure, leadership, motivation, organizational culture, successful strategy formulation does not all guarantee successful strategy implementation (Barnat, 2014). Jooste & Fourie (2009) noted that the high failure rate of strategic implementation efforts is well documented, and many barriers to effective strategic implementation exist. Excellently formulated strategies will fail if they are not properly implemented. Noble (1999) noted that the failure of the best formulated strategies may come from unsuccessful implementation. In addition, many strategy studies claim that most of strategy implementation efforts fail (Ashkenas & Francis, 2000; Beer & Nohria, 2000; Jonk & Ungerath, 2006; Raps, 2004; Atkinson, 2006). However, many studies indicate that strategic implementation have received less attention from both academics and practitioners compared to strategic formulation (Chaimankong & Prasertsakul, 2012). Thus, it is essential to indicate that effective strategy implementation is based on organizational dimension as transformational leadership.

Strategic leadership is perceived as an important component of effective strategic management. Bryson (1989) noted that strategic leadership creates organization’s change and conducts the direction, encouragement and motivate behavior of workers. Leadership capacity makes directions for the organization, allocates resources, and creates activities to support those directions. Public sector leaders focus their organizations on strategic directions and strategic changes. They also encourage employees by giving power and authority to make decisions. Gracia-Morales et al. (2012) defined transformational leadership as leadership style that focuses on increasing interests of the organization's members and supports them to reach their goals. Thamrin (2012) found that transformational leadership has a positive influence on employees’ performance. It is mentioned that this style of leadership can bring significant changes to employees’ work. According to Bass (1999); Bass & Avolio (2000), transformational leadership intended to the organization’s goals and employees’ internalization and encourage to increase organizational performance and their benefits. Herold, Fedor, Caldwell, & Lui (2008) concluded that transformational leadership approaches have been successful in promoting change. Thus, transformational leadership is required to complete effectively strategic implementation.

In addition, this study addresses organizational culture as one of core competencies of an organization. It is defined as values and beliefs that relate to an organization’s behavior and norm. In order to increase effective strategic implementation, it must relate to the organizational culture. The previous studies found that organizational culture seemed to have some substantial influence on organization’s strategy (Mantere, 2000; Van Der Maas, 2008; Van Buul, 2010). Therefore, organizational culture is required as a combining and encouraging factor considered in the implementation process. It is essential to measure organizational culture that will help organization achieves strategic implementation. However, only a few studied implicitly the effect of culture on strategic implementation (Mantere, 2000; Van Der Maas, 2008). It is
important to assess the underlying assumptions related to organizational culture and effective strategic implementation. Thus, this study emphasizes on the moderating effect of organizational culture on the relationship between transformational leadership and effective strategic implementation.

Among the levels of government, local government, particularly municipality is considered as organization that implements strategies. Many external factors influence strategic implementation in local government in the Thailand. In addition, the reforms of local administration by central government by encouraging various tools which focus on performance measurement. Local authorities need to develop the capacity of implementation systems and processes in order to achieve the organizational goals. However, the failure of strategy implementation efforts in Thai local governments is well accepted, and many barriers to effective strategic implementation still exist (Nagai et al., 2008). In addition, Mektrairat et al. (2009) concluded that a lack of strategic leadership has been identified as one of the main barriers to effective strategic implementation in Thai local governments.

Thus, this study addresses the importance of municipalities to the clients. Municipality is a basic government organization which provides public services to citizens. It is also one of the means to achieve the ends of decentralization. It is important to focus on the role of municipalities’ leadership and organizational culture that influence effective strategic implementation. Therefore, this study focuses on the role of transformational leadership in effective strategic implementation in municipalities in Trang Province, Thailand. In addition, this study tries to investigate organizational culture as a moderator variable that may effect on the relationship between transformational leadership in effective strategic implementation.

2. Research Question
This study links the issue of effective strategic implementation with the study of leadership style and organizational culture. Thus, this study seeks to ask the following research questions:

i. What is the perceived role of transformational leadership of administrative officials in municipalities in Trang Province?

ii. What is the degree of effective strategic implementation in municipalities in Trang Province?

iii. What is the role of transformational leadership in effective strategic implementation in municipalities in Trang Province?

iv. How does organizational culture moderate the relationship between transformational leadership and effective strategic implementation in municipalities in Trang Province?

3. Research Objectives
This study tries to accomplish the following objectives.

i. To investigate the perceived role of transformational leadership of administrative officials in municipalities in Trang Province.

ii. To assess the degree of effective strategic implementation in municipalities in Trang Province.

iii. To examine the role of transformational leadership in effective strategic implementation in municipalities in Trang Province.

iv. To investigate how organizational culture moderates the association between transformational leadership and effective strategic implementation in municipalities in Trang Province.

4. A Review of the Literature
4.1. Resource-Based View
Resource-based View (RBV) is based on the concept of organization’s resources and the view of the organizational capabilities that provides the basis for its strategy. RBV argues against a theoretical framework that describes organizations that are successful in creating competitive advantage and sustainability (Eisenhardt & Martin, 2000). The resources of an organization possesses include all assets as management skills, organizational processes, organizational capabilities to achieve organizational effectiveness. Zheng, Yang & McLean (2010) concluded that many studies have been considered widely in
the relationship between leadership, organizational culture, and strategy with organizational effectiveness.

4.2 Concept of Effective Strategic Implementation
Strategy implementation is an involving circle between strategic formulation and control. Strategy implementation has become the most significant management challenge. However, Rajasekar (2014) founded that strategy implementation is more problematic than strategy formulation. In order to achieve strategy implementation, it involves many keys as leadership abilities, resources management, accuracy planning, and the confidence in strategy. According to Mushtaq (2008), suitable leadership is required to reach the organizations goals and also effective strategy implementation. Barnat (2014) concluded that implementing strategy depends on change management which improves organizational performance. The motivating manager became a key determinant to make changes for strategic implementation. The study concluded that motivational leadership, organizational performance, and changing plan to action affect strategic implementation.

4.3 Concept of Transformational Leadership
To successfully implement an organization’s strategy, it must focus on the leaders who create, monitor, encourage and reward. Thus, the leadership is required to effect effective strategic implementation. Sullivan & Decker (2012) noted that transformational leadership focuses on organizational change through a commitment to the organization’s vision. The findings of the study show the impact of transformational leadership on organizational performance positively. Transformational leadership has an effect to organization's benefits by creating strategic organizational change (Waldman, Javidan, & Varella, 2004). Thobani (2011) found that the roles of middle manager assist the effective strategic implementation. Omondi (2013) mentioned that three organizational factors affecting effective strategy implementation consist of policy regulations, management competencies and the resource allocations to define successful strategy implementation. Cavazotte, Moreno & Bernardo (2013) examined the influences between transformational leadership and subordinate formal and contextual performance. They found that higher task performance is created by transformational leadership. Gang, In-Sue On, Courtright, & Colbert (2011) found that transformational leadership was positively associated to individual performance, team performance, and also organization performance.

4.4 Concept of Organizational Culture
Dodek et al. (2010) noted that organizational culture is to an organization what personality is to the individual. Ahmadi, Salamzadeh, Daraei, & Akbari (2012) studied the relationship between organizational culture and strategic implementation. Results clear up that the role of culture has an influence on strategic implementation. In addition, Fey & Denison (2003) found that organizational culture has a positive association with effectiveness and performance. Robbins & Sanghi, (2007) concluded that there is a relationship between cultural traits and organizational effectiveness. In addition, Alvesson (1989) defined that the acceptance of organizational culture is an important tool for accomplishing performance. Thus, organizational culture is measured as a key driver in strategy implementation process (Schein, 2009).

5. The Conceptual Framework
This study investigates the impact of transformational leadership and organizational culture on strategic implementation in municipalities in Trang Province, Southern Thailand. This study is based on the concepts of Strategic Management and Results Based Management to measure a successful strategic implementation as an organizational performance in public sector. Thus, the conceptual foundations of this study consist of three concepts as transformational leadership, organizational culture, and strategic implementation. In this study, transformational leadership is considered the major independent variable whereas the dependent variable is effective strategic implementation. In addition, a conceptual framework is constructed to include the moderating organizational culture factors that might have an effect on the relationship between transformational leadership and effective strategic implementation which is shown in figure 1.
6. Hypothesis
The role of transformational leadership has been extensively emphasized as the key factor of effective strategic implementation. Various studies assert association between leadership and strategic implementation (Nutt, 1986; Noble, 1999; Schaap, 2006; Cater & Pucko, 2010). The hypothesis is followed.

H1: Transformational leadership has a positive impact on effective strategic implementation. Organizational culture influences results in the success or failure of strategic implementation. It makes complete sense that organizations would consider culture in strategic management. Many studies have also showed a significant influences between organizational culture and strategic implementation (Ahmadi, Salamzadeh, Daraei, & Akbari, 2012; Lismen, Margaret & Ed Snape, 2007; Schein, 2009). The hypothesis is followed.

H2: Organizational culture moderates the relationship between transformational leadership and effective strategic implementation.

7. Contribution of the Study
This research seeks to assess the extent of the degree of transformational leadership and effective strategic implementation in municipalities in Trang Province. In addition, this study examines the role of transformational leadership in effective strategic implementation with the moderating effect of organizational culture. The results are to:

i. Integrate the framework of strategic management, organizational culture, and leadership for testing the conceptual framework in municipalities in Trang Province.

ii. Provide a conceptual understanding of strategic management in public sector which leads to preferable replies by municipalities’ officials in order to achieve strategic implementation.

iii. Advise the administrative officials to consider in their leadership and organizational culture in order to successfully strategy implement.

iv. Improvemunicipalities’ capabilities in order to achieve the strategic accomplishment.

8. Scope of the Study
This study employs quantitative method. The target population of this study consists of administrative officials in municipalities in Trang Province, Thailand. The research starts from 2017 and completes within two years.

9. Research Methodology
9.1 Research Design
Descriptive research is designed to obtain data in order to define the relationship between variables. This
research employs quantitative methods. The questionnaires are collected from administrative officials of municipalities in Trang Province. This study employs a deductive model to provide evidence for testing hypothesis.

9.2 Population and Sample Sizes
In this study, the target population is administrative officials who are working in three types of municipalities in Trang Province. The total population is around 410 administrative officials. According to the sampling table by Krejcie & Morgan (1970), the total sample size is 201 respondents. The Proportional Stratified Random Sampling is used as a method of sampling which is shown in Table 1.

9.3 Measurement
Survey items are developed from existing instruments to test the study’s model and hypothesis. Specifically, the components of three variables as strategic implementation, transformational leadership, and organizational culture will be assembled.

9.3.1 Measuring Effective Strategic Implementation
Balanced Scorecard created by Kaplan & Norton (1992) has implemented to assess organizational performance. To measure performance in Thailand’s public organizations, the Office of the Public Sector Development Commission of Thailand (OPDC) applied Balanced Scorecard which consists of four elements as effectiveness of strategic plan implementation, quality of service delivery, efficiency of public work, and organization development. This study adapts the measurements applied by OPDC (OPDC Handbook, 2009) to measure effective strategic implementation in public organization. The instrument consists of four perspectives as: 1) Effectiveness, 2) Service Quality, 3) Competency of Servants, and 4) Innovation.

9.3.2 Measuring Transformational Leadership
This study adapts the Survey of Transformational Leadership (STL) developed by Avolio, Bass, Walumbwa, & Zhu (2004) to measure transformational leadership. The STL has been comprehensively used and is regarded a well-validated measure of transformational leadership (Awamleh & Gardner, 1999). In addition, STL is comprehensive instruments and widely available to evaluate transformational leadership. The instrument consists of four dimensions as: 1) Inspirational Motivation, 2) Intellectual Stimulation, 3) Individual Consideration, and 4) Idealized Influence.

9.3.3 Measuring Organizational Culture
Organizational culture is an important determinant of organizational success. This study adopts the Denison Organizational Culture Survey and Theory established by Fey & Denison (Fey & Denison, 2003) to determine public sector organizational culture. The Denison model is a comprehensive organizational culture model. This instrument is used because of its theoretical foundation, and its use in past studies of both the public and private sectors. The instrument consists of four dimensions as: 1) involvement, 2) consistency, 3) adaptability, and 4) mission. All perceptions of respondents are measured through a five-point Likert scale (1=strongly disagree to 5=strongly agree).

9.4 Data Collection Process
The data collection process starts in 2017. Thirty questionnaires of the respondents are used in a pilot study to estimate the research instruments while questionnaires are distributed to the administrative officials in municipalities in Trang Province, Thailand.

9.5 Validity and Reliability
This study examined the content validity and construct validity. Content validity of the instrument was achieved by adopting the items that were used in the previous studies and gathering experts’ opinions. According to Hair et al. (2006), seeking opinions from academics who are experts in their particular areas leads to proper assessment of the content validity. Thus, to obtain feedbacks on the instruments, the questionnaires were sent to the experts in the academic area of this study at Prince of Songkhla University, Thailand. Based on the comments, item corrections were carried out to rewrite and to ensure the wording and clarity of the items. Before deciding on the actual measurement to be used, a pilot study of a sample of 30 respondents was distributed to administrative officials. The reliability value for each measurement was computed for a pilot study. The reliability analysis was used on the variables to test the internal consistency of all instruments. The results are presented in Table 2.

According to Hair et al. (2006), Cronbach’s alpha values less than 0.60 is identified to be poor, 0.60 to 0.70 is moderate, 0.70 to 0.80 is good, 0.80 to 0.90 is very good, and over 0.90 is excellent. The results in Table 2 show that the three instruments were clear and comprehensible to all of them. All three measurements show adequate levels of internal reliability.

9.6 Data Analysis Technique
For data analysis, this study uses descriptive statistics, for example, frequency, percentage, mean, variance, and standard deviation to describe data. Exploratory factor analysis is conducted to evaluate the validity and reliability of measurement scales (Hair et al., 2010). Inferential statistics, for example, correlation and regression analysis are used to test the relationship between variables and hypothesis of this study.

10. Conclusion
Many factors include leadership and organizational culture influence in effective strategic implementation. This study considers in the role of transformational leadership in effective strategic implementation with the moderating effect of organizational culture. Quantitative method is conducted. The study uses the case study of administrative officials in municipalities in Trang Province, Thailand. This study integrates the context of strategic management, leadership, and organizational culture for
testing the conceptual framework. The study is particularly useful for improving the roles of administrative officials in order to achieve effective strategic in municipalities.
