| ABSTRACT |
| This study aimed to depict the disclosure of corporate social responsibility (CSR) practices of commercial banks in Bangladesh. The sample included annual reports for the year 2018 of twenty-eight commercial banks out of thirty commercial banks listed on the Dhaka Stock Exchange (DSE) as of June 30, 2019. The data were analyzed using the content analysis technique. The findings indicate that commercial banks have made CSR contributions to eight sectors and disclosed CSR information through thirteen sections of the annual report covering a mixture of four tools. Moreover, although most of the commercial banks have disclosed some quantitative data, the aggregate amount of qualitative and mixed types of CSR disclosure is higher than that of purely quantitative ones. Additionally, all commercial banks have utilized ‘other expense' section for CSR expenditures in the body of ‘financial statements', but most of the commercial banks have ignored 'corporate social responsibility' sub-head and preferred ‘Donation' or ‘Subscription and Donation' sub-heads in the ‘notes to financial statements'. The overall finding indicates that the CSR disclosure issue in Bangladesh has not received sufficient attention from the commercial banks. This study, therefore, recommends that CSR reporting should be formalized and regulated to enhance stakeholders' confidence in an entity's CSR practice. |

1. Introduction

In competitive global markets, the stockholders, as well as, other stakeholders are taking their investment decisions by evaluating both financial and non-financial performances. Carrying out corporate social responsibility (CSR) is one of the most common non-financial performances of a company (Vartiak 2016). Thus, there created a necessity for information about CSR performance along with the financial indicators of a company. In this sense, as a vital route of communicating the social and environmental impacts on society and stakeholders caused by the business operations CSR reporting is becoming critical for a company (Vartiak 2016). According to Reynolds and Yuthas (2008), CSR reporting is an integral part of a corporation’s overall set of CSR activities, and CSR disclosure has been emerging over the past years (O’Dwyer, Unerman, and Bradley 2005; Gray, Owen and Maunders 1988). In other words, CSR
reporting is not only influenced by dominant stakeholders, but also by a combination of the prevalent institutions, values, culture, and history of a particular country (Momin and Parker, 2013). The terminology deploys for such reporting, and disclosure practice is varied worldwide and termed as corporate social disclosure, social accounting, socially responsible accounting, sustainable reporting, and social and ethical accounting (Islam 2012). Additionally, although some companies publish separate CSR reports, most of the companies likely prefer to disclose CSR information through their annual reports because the annual report is a vital document to build the social image of an organization (Luethge and Han 2012; Deegan, Rankin, and Tobin 2002; Gray, Kouhy, and Lavers 1995b; Gray, Kouhy, and Lavers 1995a). In this aspect, a large number of empirical studies investigated the companies’ CSR disclosures in the annual report. According to Belal (2001) most of these studies were in the context of developed countries from America, Europe, and Australia (e.g., Fernández-Gago, Cabeza-García, and Nieto 2018; Burritt and Schaltegger 2010; Othman and Ameer 2009; Gray 2006; Adams C., Hill W., and Roberts C. 1998; Kong 1996; Gray et al. 1995a; Roberts 1991; Zeghal and Ahmed 1990). Few types of research explored CSR disclosure practices of companies in developing countries like Bangladesh, India, Malaysia, Singapore, and Thailand (e.g., Mohammad and Kamal 2016; Momin and Parker 2013; Sobhani, Amran, and Zainuddin 2012; Belal and Cooper 2011; Belal and Roberts 2010; Wise and Ali 2009; Murthy 2008; Belal and Owen 2007; Hamid 2004; Kuasirikun and Sherer 2004; Belal 2001; Belal 2000; Imam 2000; Tsang 1998). Evidence from the previous studies indicates that the extent of CSR disclosures in annual report of companies in developing countries is lower than that in the developed countries and in case of Bangladesh, the level of CSR reporting is small and inadequate (Belal and Cooper 2011; Belal 2001; Imam 2000). Only a few of these studies have explored the CSR activities and disclosure sections, contents, and nature. In addition to these, no particular research has addressed the usage of the account head and sub-head for CSR expenditure in the body of the ‘financial statements’ and the ‘notes to financial statements’in the annual report of a company respectively. The present study, therefore, is an attempt to fulfill the above gaps in the CSR literature, especially for Bangladesh.

For several reasons, as are described below, the current researchers have selected Bangladesh and CSR disclosure practices of commercial banks as a study area. Firstly, having grown and fostered in the developed world, CSR issues are also getting its popularity as a research area in developing countries like Bangladesh (Quazi, Rahman, and Keating 2007). Secondly, for her recent remarkable progress from an economic perspective, Bangladesh holds the typical characteristics of a developing country, and like Hossain and Alam (2016) and Haque and Azmat (2015) many authors are recognizing Bangladesh as “a role-model of developing the world” and “an emerging economy in South East Asia”. Thirdly, although Bangladesh has already shifted its position “from a low-income country to a middle-income country”, it is still facing several social problems (Hossain and Alam 2016). Thus, as development co-partners with the government of Bangladesh, corporations are giving exceptional attention on philanthropy-driven CSR activities to mitigate the social issues and implementing CSR policy to form social equity within their relevant stakeholders such as employees, suppliers, and society-at-large (Karim and Kasim 2018). Fourth, national and multinational corporations in Bangladesh are facing massive pressures to consider the social consequences of their activities and the stakeholders are gradually becoming more attentive to the CSR activities and its disclosures (Belal 2001). Fifth, although CSR concepts have become a focal point among business, academia, and civil society in Bangladesh (Rahim 2013), there is no particular regulatory law in this country exclusively addressed CSR practices. However, since 2008, Bangladesh Bank (BB)-the central bank of Bangladesh, has been monitoring CSR adoption and practices of commercial banks by issuing various circulars and guidelines from time to time (Ullah 2013; Mahbuba and Farzana 2013). Most of the commercial banks, as per the instructions of BB, are providing donations in the areas of patronizing education, poverty lessening programs, sponsoring in sports and social functions, undertaking low-cost housing projects, creating job opportunities for unemployed youth and addressing other community issues (Sobhani et al. 2012). Finally, as the most important and flourishing industry in Bangladesh, banking companies have accomplished global attention in the last few years, and they are...
continuing their enormous contribution to the economic success of the country (Sobhani et al. 2012; Sarker 2000).

2. Literature Review

Global pressure and competition as well as the demand for a scandal-free ethical business community are revolutionizing ideal business practices. Institutional reinforcement such as “the Sarbanes Oxley Act” and other regulations are providing an impetus for increased reporting voluntarily. In this sense, government officials, business leaders, and academics are focusing with the intensive attention to the concept of “corporate social responsibility” which denotes the sacrificing profits for the social interest (Reinhardt, Stavins, and Vietor 2008). Previously, firms acted merely as a valuable tool to its shareholders, remained obedient to the laws of the land, and felt no need to become socially responsible (Friedman 2007). But, Carroll (1979) observed that firms have ethical and philanthropic responsibilities apart from those financial and legal obligations. Since then, firms, willing to create a socially responsible image for itself, are expected to operate their economic activities that can hold the environmental sustainability concept while recognizing the interests of its numerous stakeholder groups (Carroll 1999). Reputed firms worldwide, especially in the developed economies, have already moved from the classical ‘profit maximizing’ approach to a ‘socially responsible' approach. They are not only responsible to its stockholders but also its consumers, employees, suppliers, community, and society at large (Rahman 2015). Moreover, companies are now far more concerned about CSR activities and the disclosures thereof to the general public. The scope of disclosure by firms has expanded to satisfy the needs not only of their share or debenture holders but also of other stakeholders, including customers, suppliers, and the government, as well as the general public (Kiliç, Kuzey, and Uyar 2015). The aim is to satisfy the stakeholders while remaining competitive because evidence proves that a company can secure its existing market share and enhance its competitiveness by spending in CSR activities (Jones 1996). Previously, few companies made some voluntary disclosures about social and ethical issues about their economic activities. But now stakeholders have become much aware of their rights, and as a result, they observe firms’ CSR activities and disclosures thereof. Thus, companies are now much conscious about their CSR disclosures and whatever they do for the society they want to disclose these in their annual report. In this aspect, Zeghal and Ahmed (1990) examined that the disclosure of social responsibility information of Canadian companies operating in the banking and petroleum industries. Their study indicates that companies provide more qualitative but less quantitative information about their CSR activities. Furthermore, Murthy (2008) utilized the content analysis technique to examine the CSR disclosure practices of the top 16 (sixteen) software companies in India. The study indicates that most of the companies disclose qualitative information and preferred ‘other sections’ of the annual reports for presenting such disclosure and few companies insert separate sections in their annual reports to disclose CSR information. Also, Tsang (1998) conducted a longitudinal study covering the period from 1986 to 1995 on thirty-three listed public companies of Singapore operating in the banking, food and beverages, and hotel industries. The result shows that most of the companies disclose CSR information relating to human resources and community involvement, and although various companies have increased the amount of CSR expenditure over the period, the extent of disclosure is not in large scale. Sobhani, Amran, and Zainuddin (2009) surveyed 100 listed companies in Bangladesh and they concluded that the level and the extent of CSR disclosures are poor. In the same lineup of studies some researchers examined that most of the companies likely prefer descriptive disclosures and focusing on ‘good’ CSR-related information in their annual reports, but the extent of such disclosure is still inadequate (Sufian 2012; Belal 2001; Imam 2000). Furthermore, Porag (2014) stated that most of the companies practice CSR in their way, and a few companies have separate CSR department. However, Bangladesh has a good number of rules and regulations, e.g. the Environmental Protection Act, 1995; the Companies Act, 1994; the Banking Companies Act, 1991; the Industrial Relations Ordinance, 1969; the Factories Act, 1965; the Employment of Labor (Standing Orders) Act, 1965; the Payment of Wages Act, 1936; and the Workmen Compensation Act, 1923 (Belal and Roberts 2010). But, Khatun (2014) mentioned that the major Bangladeshi laws
related to corporate regulation and responsibility do not have the necessary features to develop a CSR-centered corporate culture in the country. Moreover, although from July 1, 2010, the government has initiated CSR reporting by the banking companies to Bangladesh Bank, still there is a demand for a cleaner environment and social accountability of banking companies.

Due to the heightened interest in the concept of CSR and its reporting and what it entails, particularly in developed countries, many researchers have conducted studies in this field. But the developing countries are far behind in responding to the increased concern about the issue of CSR reporting. Previously, some researchers explored the volume of CSR disclosures in terms of pages devoted to social reporting and concluded that CSR information is descriptive and the quantity of exposure is also inadequate and weak (Belal 2000; Belal 2001; Imam 2000). Furthermore, Hackston and Milne (1996) investigated the pictorial presentation of CSR activities, and Vourvachis et al. (2016) examined the extent and the volume of CSR disclosures in terms of pages, pictures, and graphs inserted in the annual report by a company. Additionally, some authors noticed the nature of disclosure whether it is purely qualitative, purely quantitative or mixed of both (Belal 2001; Williams and Ho Wern Pei 1999; Walden and Schwartz 1997; Zeghal and Ahmed 1990).

Moreover, the above examinations were limited to the number of companies having CSR disclosures with particular purposes. They did not explored CSR disclosures in terms of the CSR activities and its disclosure sections, contents, and nature of information as well as usages of the account head and subhead for CSR expenditure at the body of ‘financial statements’ and ‘notes to financial statements’ in the annual report of a company as a whole. Accordingly, the present study adds to the growing body of literature in the area by focusing on previous issues.

3. Method
3.1 Data Source
Previously, some researchers investigated the annual reports to explore the extent and the volume of CSR disclosures (Luethge and Han 2012; Deegan et al. 2002; Gray et al. 1995a; Gray et al. 1995; Gray et al. 1988). The earlier researchers marked that the annual report as a vital document of an organization can construct the social image of a particular entity. Thus, CSR performance data is becoming an increasingly important feature of companies’ annual reports (Vartiak 2016). However, in Bangladesh, corporations communicate their primary means of information through the annual report (Hossain, Islam, and Andrew 2006; Belal 2001). Previously many researchers considered the annual report as a secondary source of data for their studies purpose (e.g., Momin and Parker 2013; Sobhani et al. 2012; Belal 2008; Belal 2001). Thus, to conduct this study, we have investigated the annual report 2018 of twenty-eight out of the thirty commercial banks listed on the Dhaka Stock Exchange (DSE) as of June 30, 2019.

3.2 Data Analysis and Presentation
According to Krippendorf (2004), content analysis is one of the standard methodologies in the social sciences for studying the content of the communication. It also refers to a suitable technique for making inferences by objectively and systematically identifying specified characteristics of information. Additionally, content analysis is a well-known technique to quantify the voluntarily disclosed corporate social details (Puncheva-Michelotti, Hudson, and Jin 2018). Previously, many studies, around the world, investigated the content analysis of companies’ annual reports to measure the volume of CSR disclosures (Vourvachis, Woodward, Woodward, and Patten 2016). Additionally, some authors conducted studies based on content analysis of companies’ annual reports to explore the corporate social reporting practices in Bangladesh (Sobhani et al. 2012; Sobhani et al. 2009; Belal 2008; Belal 2001).

Thus, to explore the CSR issue, several times the responsible members of the research team have read the printed version of the annual reports of the sampled commercial banks from the first page to the last one. The researchers have categorized the CSR activities into eight groups and recognized as the CSR section
if there is any CSR information throughout the different parts of the annual report. They have also measured the volume of disclosure in term of the number of the sentence, picture, table, graph and page contained CSR information; and determined the nature of data (qualitative, quantitative and mixture) based on whether it is descriptive in nature or figure expressed with taka (Bangladeshi Currency). Furthermore, the study has examined the body of ‘financial statements’ and ‘notes to financial statements' to get the specific account head and sub-head that contains the amount of CSR expenditure for a particular financial year.

Moreover, to look closely at the nature of the entire aggregate disclosures made by the sampled banks (∑DN) across the vital sections, whether it is (i) purely qualitative or (ii) purely quantitative or (iii) both (qualitative and quantitative) in a particular section (SN), and the entire disclosures made by banks in a particular section, DN, should be the summation of all three types of disclosure. For this purpose, researchers of this study have constructed the following formulae

\[ DN = QLN + QAN + QLAN \] (1)

\[ ∑DN = ∑QLN + ∑QAN + ∑QLAN \] (2)

Where
- DN denotes the total number of disclosures by all banks in a single section
- QLN denotes the total number of purely qualitative disclosures by all banks in a single section
- QAN denotes the total number of purely quantitative disclosures by all banks in one section
- QLAN denotes the total number of mixed disclosures by all banks in a single section

However, utilizing the content analysis technique, this qualitative study has presented its outcome through various tables with a brief description of each of them.

4. Findings

4.1 CSR Activities of Sampled Banks

To assist in the understanding of accurately which types of CSR activities are performed by the commercial banks, an analysis has been done. In 2018 almost every commercial bank has contributed to the educational development of Bangladesh through scholarship programs, stipend package, and granting research funds. Furthermore, all of them have granted donations to hospitals, clinics, arranging free treatment for insolvent patients, etc. Almost every commercial bank has also donated to flood-affected, and cold waves affected people. Moreover, most of them have played very sincere roles in protecting the environment, but some have not mentioned anything in this aspect. Some banks have contributed to sectors other than those included in previous sections, for example, patronization of sports, and cultural functions. A few numbers of banks have allotted CSR funds to construct buildings for schools, colleges, and universities, and an extension of the road. Very few banks have disclosed their human-resource-related packages in their CSR sections. However, we have found out eight particular CSR sectors in which commercial banks in Bangladesh likely prefer to make CSR contributions and hence they have disclosed information related to these CSR activities in their annual reports. In general, the main CSR sectors can be categorized into relating to eight major areas as follows:

<table>
<thead>
<tr>
<th>Sl. No.</th>
<th>The sector of Specific Activities</th>
</tr>
</thead>
</table>

Table 1: Common sectors of CSR of commercial banks in Bangladesh

Table 1 indicates that there are eight specific sectors of CSR, i.e., contribution to education, health, humanitarian & disaster management, environment, cultural welfare, infrastructural development, income-generating activities, and others. As per their statements, the motto of this CSR is to help the underprivileged people and environmental sustainability for sustainable development of the country.

Source: Researchers’ compilation from the annual reports of sampled banks

Table 2 indicates that in 2018, all sampled banks (100%) have disclosed information about their CSR contribution to education, health, and humanitarian and disaster relief. In addition to this, approximately 78.57% of sampled banks have disclosed their steps taken to protect the environment, and 53.57% of sampled banks have published their contributions toward building a culture based progressive society. But less than half of the total sampled bank has disclosed information about their CSR contribution to infrastructural development and income-generating activities. Moreover, the majority of banks have published their initiatives to address other social issues.

4.2 Sections of CSR Disclosures in the Annual Reports

The study indicates that all sampled banks have made CSR disclosure in the annual report 2018. But they have used a variety of sections of annual reports for such disclosure because there is no standard format for CSR disclosures in Bangladesh.

Table 3: CSR Disclosure Sections in the Annual Reports

Table 3 indicates that the sampled banks have used the thirteen sections in annual reports to disclose CSR information. These sections can be called relevant CSR disclosure sections of banks in Bangladesh.

Table 3 indicates that the sampled banks have used the above thirteen sections in annual reports to disclose CSR information. These sections can be called relevant CSR disclosure sections of banks in Bangladesh. If all twenty-eight banks have used all thirteen critical parts of their annual reports for CSR disclosure, there would have been 364 (28×13) disclosures theoretically. But in reality, the sampled banks have made a combined total of only 154 disclosures across these sections revealing the fact that CSR disclosure has not received sufficient attention from the banking industry of Bangladesh. However, the
most popular parts are S13, and S8 (used by 85.71% and 82.14% banks respectively) and the least favorite section is S5 (used by only 7.14% banks). Furthermore, most of the sampled banks (71.43%) have dedicated a separate section for CSR disclosure in their annual reports. The overall finding also indicates that most of the sampled banks generally use more than one part to disclose CSR information.

### Table 4: Frequency distribution for usage of CSR disclosure sections

Table 4 indicates the range of usage of sections by a particular bank. The possible outcome is a maximum of thirteen sections and minimum one section.

<table>

</tbody>
</table>

Source: Researchers’ compilation from the annual reports of sampled banks

Table 4 indicates that no bank has used all thirteen relevant sections for CSR disclosure in the annual report 2018. Only a particular bank has used a maximum of eight parts, and approximately 92.86% of banks have used two or more sections, whereas about 7.14% have used only one division.

#### a. The measurement of contents of CSR disclosures

The sampled banks generally use four tools such as descriptive, photo, table, and graph to disclose CSR information. The study has also attempted to measure the contents of CSR disclosures in the annual reports in terms of the number of sentences, photos, tables and graphs placed and in addition to these; it has also determined the volume of pages that contains CSR information.

### Table 5: Use of tools (Descriptive, Photo, Table and Graph) for CSR disclosure

Table 5 carries the tools of CSR disclosure and how many banks have utilized each of them to disclose CSR information.

<table>
<thead>
<tr>

</tbody>
</table>

Source: Researchers’ compilation from the annual reports of sampled banks

Table 5 indicates that all commercial banks have presented CSR information in descriptive form using sentences ranging from as high as 1628 to as low as 4. Moreover, approximately 92.86% of sampled banks have attached pictures (ranging from as high as 70 to as little as 1), and precisely 50% of sampled banks have inserted tables (ranging from as high as 28 to as low as 1) for CSR disclosure. On the contrary, only 32.14% of sampled banks have to prefer to use the graph for their CSR disclosure.

The number of tools has been used by the banks also varied, which are shown in the following table.
Table 6: Frequency distribution of the number of tools used
Table 6 indicates that a bank can utilize maximum four tools and minimum 1 and the multiple combinations with the usages of descriptive, picture, table, and graph tools.

<table>
<thead>

<td>8</td>
<td>28.57</td>
</tr>
</tbody>
</table>

Source: Researchers’ compilation from the annual reports of sampled banks

Table 6 indicates that approximately 39.29% of the sampled banks have used two tools, approximately 28.57% of sampled banks have used four tools, and only 25% of banks have used three tools for CSR disclosure. Moreover, not all sampled banks have used all tools.

In the next sub-section, this study has also measured the contents of CSR disclosures in terms of the number of sentences written by the banks to discuss their CSR issue. Researchers have categorized the observations into five closed intervals and one open interval.

Table 7: Number of sentences written for CSR disclosures
Table 7 indicates the volume of detailed explanation in term of the number of sentences used for CSR disclosure in the annual report. The range is 1 to more than 200 sentences.

</tbody>
</table>

Source: Researchers’ compilation from the annual reports of sampled banks

Table 7 indicates that approximately 39.29% of sampled banks have written 51-100 sentences, followed by 35.71% of the sampled banks have written below 51 sentences. The highest and lowest numbers of sentences are 1628 and 4 respectively. Moreover, only three sampled banks have written over 200 sentences for disclosures their CSR issues.

This study has further measured the contents of CSR disclosures in terms of the number of related pictures posted in annual reports. Five closed intervals and one open interval are developed for this purpose.

Table 8: Number of photo posted for CSR disclosures
Table 8 presents the status of pictorial presentation of CSR activities of banks. The number of photos is varied from bank to bank, and the range is 0 to more than 20 photos.

<tr>
<td>6-10 Photos</td>
<td>7</td>
<td>25.00</td>
</tr>
</tbody>
</table>
Table 8 indicates that approximately 32.14% of sampled banks have posted the 1-5 photo(s) followed by 25% of sampled banks’ posting of 6-10 photos and two sampled banks (7.14%) have not posted any photo related to their CSR activities. Moreover, approximately 17.86% of banks have attached more than 20 photos.

Additionally, this study has also measured the contents of CSR disclosures in terms of the number of tables and graphs placed in annual reports. Six closed intervals and one open interval are developed for these purposes.

**Table 9: Number of tables placed for CSR disclosures**

Table 9 contains the CSR disclosure of sampled banks in term of the number of the table used by the banks. The range is 0 to more than five tables inserted by various banks.

<td>3.57</td>
</tr>
</tbody>
</table>

Table 9 indicates that half of the sampled banks have not inserted any table, and only 17.85% of banks have placed five or more tables (out of the remaining 50%) for CSR disclosures.

**Table 10: Number of graphs placed for CSR disclosures**

Table 10 shows the number of graphs usually used by the banks to present their CSR issues in the annual report. The range is 0 to more than five graphs that contained CSR related information of banks.

<table>

</tbody>
</table>

Table 9 indicates that half of the sampled banks have not inserted any graph, and only 17.85% of banks have placed five or more graphs (out of the remaining 50%) for CSR disclosures.
Table 10 indicates that approximately 67.86% of sampled banks have not inserted any graph and only 10.71% of sampled banks have placed only three graphs, and the remaining 21.43% of sampled banks have used two or more graphs for CSR disclosures.

Finally, to measure the extent and the length of contents of CSR disclosures, this study has counted the number of pages in the annual report and categorized the observations into five closed intervals and one open interval.

Table 11: Number of page(s) used in the annual reports for CSR disclosures
Table 11 measures the utilization of the number of pages to disclose CSR related information of banks. The usages of the page(s) are between 1 to more than 20 pages.

Source: Researchers’ compilation from the annual reports of sampled banks

Table 11 indicates that more than 50% of sampled banks have confined CSR disclosures within 1-5 page(s). Moreover, approximately 28.57% of sampled banks have utilized 6-10 pages, and only 7.14% of banks have applied more than 20 pages to disclose CSR information. The highest number of pages used is 88, and the lowest is 1.

4.4  Nature of CSR Disclosures in the Annual Reports
This section of the study has examined, broadly, the nature of CSR disclosures in the annual report 2018 of the sampled banks. Firstly, the researchers have questioned whether CSR disclosures made by all banks contained a mixture of qualitative and quantitative information, at least in one crucial section or not.

Table 12: Nature of CSR disclosure practices of sampled banks
Table 12 shows the nature of disclosure, whether it is mixed with qualitative and quantitative information or not.

<table>
<thead>
<tr>
<th>Nature of Disclosure Practice (Mixture or Non-mixture)</th>
<th>No. of Banks</th>
<th>Percentage (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mixed disclosure occurred at least in one vital section</td>

<td>92.86</td>
</tr>
<tr>
<td>No mixed disclosure occurred in any critical part</td>
<td>2</td>
<td>7.14</td>
</tr>
</tbody>
</table>

Source: Researchers’ compilation from the annual reports of sampled banks

Table 12 indicates that the mixed disclosure is the industry practice for banking industry’s CSR reporting as most of the banks (92.86%) have used a mixture of qualitative and quantitative information at least in one central CSR disclosure section.

Secondly, researchers have examined whether the relevant CSR disclosure sections used by the banks are purely qualitative or purely quantitative or a mixture of both.
Table 13: Nature of CSR disclosure sections
Table 13 presents the section which contains purely qualitative or quantitative or mixed of both. Among 13 original parts five sections contain purely qualitative, only one section contains strictly quantitative, and seven sections include mixed types of CSR information.

<table>
<thead>

<td>7</td>
</tr>
</tbody>
</table>

Source: Researchers’ compilation from the annual reports of sampled banks

Table 13 indicates that only one section is purely quantitative out of the thirteen vital parts. The remaining twelve sections contain either purely qualitative disclosures or mixed disclosures. The findings of Table 3 and Table 13 enable the study to (i) discover which nature of CSR disclosure sections contained how many actual disclosures, (ii) compare those actual disclosures with the theoretically possible number of exposures and (iii) calculate the discrepancies (if any). For this purpose,

Table 14 is constructed, which is given below
Table 14: Comparison between the number of actual and theoretically possible disclosures according to the nature of CSR disclosure sections

</tbody>
</table>

Source: Researchers’ compilation

The previous finding of this study (Table 3) indicates that S13, the solitary purely quantitative disclosure section, is the most popular CSR-disclosure section of the annual report. The actual number of disclosures in this section is 24 compared to the theoretically possible 28 (28×1). The study has also found that the five purely qualitative disclosure sections (S1 – S5) are among the least favorite CSR disclosure sections of the annual report. The actual number of disclosures in these sections is a total of 21 (4+5+5+5+2) comparing to the theoretically possible 140 (28×5) exposures; the number of real revelation is weak. A meager actual-to-theoretical disclosure ratio, in this case, indicates that the sampled banks are lagging in terms of their CSR disclosures in purely qualitative sections. The study has further found that the seven mixed disclosure sections (S6 – S12) are also the most frequently used CSR-disclosure sections after S13. The actual number of disclosures in these sections is a total of 109 (14+17+23+20+14+16+5) comparing to the theoretically possible 196 (28×7) exposures; it is moderate. The average actual-to-theoretical disclosure ratio, in this case, indicates that the sampled banks are more comfortable to use S6 - S12 than S1 – S5 for CSR disclosure. Finally, an actual meager number of 154 revelations by the banks compared to the theoretically possible 364 (28×13) exposures reveal the fact that the CSR disclosure issue is not received sufficient attention by the banking industry of Bangladesh.
Thirdly, the study has extended its attempt to look closely at the nature of the entire aggregate disclosures made by the banks (∑DN) across the critical sections. A bank may choose to disclose (i) purely qualitative or (ii) strictly quantitative or (iii) both (qualitative and quantitative) information in a particular section (SN). Thus, entire disclosures are made by all banks in a specific segment; DN should be the summation of all three types of exposure. The study, therefore, has reconstructed Table 3, which is shown in Table 15.

Table 15: Breakdown of total disclosures in all sections according to the nature of disclosure (Qualitative/Quantitative/Mixed)

Aggregate total number of disclosures by sampled banks across sections according to the nature of disclosures

<table>
<thead>
<tr>
<th>∑DN = ∑QLN + ∑QAN + ∑QLAN</th>
</tr>
</thead>
<tbody>
<tr>
<td>154 = 65 + 24 + 65</td>
</tr>
</tbody>
</table>

Source: Researchers’ compilation

Table 15 indicates that the total number of qualitative disclosures and mixed disclosures made by the banks are precisely equal in 2018. But in the case of seven mixed disclosure sections for CSR (S6 – S12), the scenario is quite different. These seven sections are dominated by mixed disclosures. Out of 109 disclosures in mixed disclosure sections (referring to Table 14), a total of 44 (7+11+10+1+4+6+5) disclosures are purely qualitative whereas a total of 65 (7+6+13+19+10+10) disclosures are mixed (both qualitative and quantitative).

4.5 The Utilization of Head and Sub-Head(s) to Account for CSR Expenditure in ‘Financial Statements’ and ‘Notes to Financial Statements’

All sampled banks have used ‘Other Expenses’ account as an account title in the body of the ‘Profit and Loss Account’ and provided details of ‘Other Expenses’ under some sub-heads in the ‘Notes to the Financial Statements’.

Table 16: The usages of sub-head(s) to account for CSR expenditure in the ‘notes to financial statements’

Table 16 shows the different sub-heads which have been used in the ‘Other Expenses” explanation section of ‘Notes to Financial Statements’ to show the CSR expenditure of banks.

<table>
<thead>
<tr>
<th>Sub-heads</th>
<th>Percentage (%)</th>
<th>No. of Banks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Corporate Social Responsibility</td>
<td>17.86</td>
<td>5</td>
</tr>
<tr>
<td>Donation</td>
<td>42.86</td>
<td>12</td>
</tr>
</tbody>
</table>
According to Table 16, approximately 42.86% of sampled banks preferred to ‘Donation’ followed by approximately 32.14% of sampled banks usage of ‘Subscription and Donation’ sub-head to disclose CSR expenses. Moreover, only 17.86% (approximate) of sampled banks have used ‘Corporate Social Responsibility’ sub-head clearly in the ‘Notes to Financial Statements’ to disclose CSR expense. Some of the sampled banks (14.29%) have established Foundations in their names to perform CSR activities and used ‘Contribution to Foundation’ sub-head to show their CSR expense. However, approximately 14.29% of sampled banks have not provided any sub-head to disclose CSR expense. Thus, there is no scope for external users to know the actual CSR expense.

5. Discussion
The overall findings of the study indicate that the sampled banks have different CSR disclosure practices. Although there are eight prime sections of CSR contribution, all banks do not contribute to all the sectors and contribution to education, health and humanitarian and disaster relief are common for all. Additionally, large numbers of banks take the initiative to protect environmental, whereas moderate amounts of banks contribute to building a culture based progressive society and a very few numbers of banks think about infrastructure development and income-generating activities and its disclosures.

Moreover, there is no uniformity in the usage of sections in annual reports for CSR disclosures. The study has identified thirteen different parts that contain CSR information, but no bank used all these sections in 2018. Some commercial banks have used only one section while others have used more than one article, and the maximum number of users is confined to eight parts. However, eight commercial banks do not have any ‘Separate CSR Section’ in their annual reports. The sampled banks have options of four tools such as descriptive (writing), pictures, tables, and graphs to provide CSR information, but they don’t focus equally on each instrument. Eight commercial banks have used all four tools, seven banks have used three tools, eleven banks have used two devices, and two banks have used only one tool. Although all banks have used a descriptive tool such as writing several sentences, twenty-six banks have posted the picture(s), fourteen banks have inserted table(s), and only nine banks have placed graph(s) that match to their CSR activities. The usages of pages are also varied, and the range is from 1 page to 88 pages.

Furthermore, these publicly traded commercial banks prefer to disclose a mixture of qualitative and quantitative CSR information. Only one section (‘Notes to the Financial Statements’) contains purely quantitative CSR disclosure, five chapters cover purely qualitative CSR disclosure, and maximum of seven sections reveal a mixture of both. Although actual-to-theoretical disclosure ratio for purely quantitative CSR information as well, a meager actual-to-theoretical disclosure ratio for purely qualitative sections' disclosures and an average actual-to-theoretical disclosure ratio for mixed sections' exposures indicate that the sampled banks are lagging in terms of qualitative and mixed CSR disclosures. However, an actual meager number of 154 revelations by the banks compared to the theoretically possible 364 (28×13) exposures reveal the fact that the CSR disclosure issue is not received sufficient attention by the banking industry of Bangladesh.

Moreover, the sampled banks have utilized ‘Other Expenses’ account head in the ‘Profit and Loss Account’ to show CSR expenditures but the sub-heads to reveal details of ‘Other Expenses’ in the ‘Notes to the Financial Statements’ are not identical. Most of the sampled banks prefer to ‘Donation’ or ‘Subscription and Donation’ sub-head, and only five banks have used ‘Corporate Social Responsibility’
sub-head whereas four banks are failed to show any sub-head for CSR expenditures. Thus, it is very tough for external users to know the exact amount of CSR expenditure from the annual reports.

6. Theoretical and Practical Implications
International accounting standard-setting bodies such as International Accounting Standards Board (IASB), as well as, concerned regulatory authorities in Bangladesh such as Bangladesh Securities and Exchange Commission (BSEC), Bangladesh Bank (BB) and the Institute of Chartered Accountants of Bangladesh (ICAB), should come forward to provide appropriate framework and detailed guidelines to ensure uniform CSR disclosure practices by national and international companies in all industries. The authorities mentioned above should pay special attention to provide a basic format for CSR reporting in the annual report. Banking companies also can introduce regular CSR reporting in the annual report through their consensus. BB should make it mandatory for all banks to put the ‘Separate CSR Section’ in annual report and guidelines for more quantitative as well as qualitative CSR disclosures.

7. Limitation and Scope for Further Study
Although numerous studies have been conducted around the world on CSR, it remains a debatable issue in many aspects. The above research is confined to the publicly traded commercial banks of Bangladesh and an attempt to investigate CSR disclosure in the annual report for a particular financial year. Similar further studies can be conducted with longitudinal data on other industries of development as well as developing countries context.

8. Conclusion
Acknowledging their responsibilities to society, the commercial banks of Bangladesh voluntarily practice CSR activities and disclose CSR information in their ways. This exploratory study has analyzed the contents of the annual report of a particular financial year of eighteen banking companies listed in DSE. It is found that their CSR disclosures are not detailed enough to justify their claims about broad CSR scope. The external users of annual reports do not get sufficient quantitative CSR information, particularly CSR expenditure for decision-making purposes. The concerned authorities, therefore, should come forward to make CSR practices and disclosures more accurate, transparent, and fair. Finally, it is hoped that the listed, as well as other banks of Bangladesh, will develop a uniform framework to communicate their respective CSR practices, so that the relevant stockholders, as well as stakeholders, will gain more confidence and trust in the ability of the banks to ethically undertake their economic activities as well as corporate social responsibility.
